

Fuel Station Forecourt:

The first image shows a modern **RUBIS fuel station in Suriname** with a large white canopy covering multiple fuel pumps, a convenience store positioned directly beside the fueling area, and several passenger vehicles actively using the station. A large Suriname flag is displayed prominently at the entrance, while a tall roadside price sign lists multiple fuel prices and includes ATM and shop branding. The property is landscaped with tropical plants, palm trees, and maintained roadside planting, giving the site a clean, organized appearance. The station layout provides clear vehicle circulation around the pumps, easy access to the shop, and good visibility from the adjoining roadway, presenting the facility as a modern retail fuel and convenience destination.

Aerial Fuel Station Complex:

The second image provides a high aerial overview of a much larger **fuel station and highway service complex**, showing separate fueling areas for heavy trucks and passenger vehicles. The truck section contains several long covered diesel fueling lanes capable of accommodating tractor-trailers, while the passenger-car section includes multiple smaller pump islands arranged in organized traffic lanes. A large convenience-store and service building occupies the lower portion of the site with customer parking, accessible parking spaces, outdoor seating, and landscaped areas. Along the right side of the property is a separate restaurant and food-service zone with tropical-style buildings, outdoor seating, and additional parking. The complex connects directly to a major highway through dedicated entrance and exit roads, creating a full-service roadside facility capable of supporting commercial trucks, local motorists, travelers, retail customers, and food-service visitors.
